Goal Digitalization

Researcher's Goals

Preparation

Idea

- Find the idea for research
- Funding exploration
- Choose the researchers for project

Researcher's Activities

- Do budgeting; calculate the cost of the researchers need
- Identify the funder/collaborator obligation e.g. data
- Consult support for possible security/ethical aspects

Researcher's Goals

- Find the idea for research
- Funding exploration
- Choose the researchers for project
- Find the theoretical foundation
- Data exploration
- Final proposal submission include the budget

Researcher's Activities

- **Do budgeting**; calculate the cost of the researchers need
- Identify the funder/collaborator obligation e.g. data
- Consult support for possible **security/ethical aspects**
- Look back at the previous project
- Literature review
- Receive the project brief from supervisor or create a new research proposal
- Recognize and consult the need of IT services and resources and contact the supporter

Researcher's Goals

- Find the idea for research
- Funding exploration
- Choose the researchers for project
- Find the theoretical foundation
- Data exploration
- **Final proposal submission** include the budget
- Review and comply with research ethics
- Get funding

Researcher's Activities

- **Do budgeting**; calculate the cost of the researchers need
- Identify the funder/collaborator obligation e.g. data
- Consult support for possible **security/ethical aspects**
- Look back at the previous project
- Literature review
- Receive the project brief from supervisor or create a new research proposal
- **Recognize and consult** the need of **IT services** and **resources** and contact the supporter
- Find grants
- Arrange the agreement between the researchers and collaborators
- Funders **requirements & obligations** and agreement reveals the **limitation/ opportunity** of using different services and service provider
- **Choose the service provider**

Wider information

Researcher's Goals

- Get research tools e.g. IT
- Build the hypothesis
- Doing simulations
- Recording the experiment
- Create and prove the right method
- Create research results

Researcher's Activities

- Establish the IT environment to the research
- Start the project and collecting the data
- Transfer the data
- Propose a method and create a hypothesis (iterative process)
- Use the IT services and solutions e.g. simulation analysis
- Collaborating between research group

Reporting

Preservation

- Get the final report to the professor/company/sponsors
- Get the feedback and recognition
- Get the data set and result from the service
- Free up resources and close everything that makes costs
- Keep the valuable data
- Get the citation or reference for the research output/data

Researcher's Activities

- Create and publish the scientific journal on the research platform or agreed portal
- Presenting the report in a conference
- Move or link the datasets to the research repository
- Report research output to the research information systems
- Filtering data; which files to keep and might be re-use in the future or to delete the unnecessary data permanently
- Transfer the ownership of service
- Close or archive the services
