

Create a national profile on [Research.fi](https://research.fi) and increase the visibility of your research!

You can now create a national profile on [Research.fi](https://research.fi)! The Researcher's Profile Tool is meant for all experts working in research, development and innovation. The Researcher's Profile tool gives you a view of what kind of information about you and your research, development and innovation activities are stored in different databases and combine existing data to a national profile that remains under your control regardless of workplace and affiliation.

The tool allows you to combine your own national profile with your ORCID information, information from [Research.fi](https://research.fi) and information transferred from your current home organisation's systems. You don't edit your data in the tool, but you can see where the information comes from and change it directly at the source of the information. If you do not find information about your current home organisation in the tool, the organisation has not yet made the necessary data transfers and the information will be available in the tool later. Information from your ORCID profile and [Research.fi](https://research.fi) are always at your disposal. Your information is stored in the tool and you can choose, what you want about yourself and your work to publish!

[Research.fi](https://research.fi) helps media, companies, publishers, financiers, law makers, decision makers and other interested in research and its results find experts in one place!

In the future, you can also share information you choose directly with third parties, such as financiers, home organisation or other services used by researchers to reduce overlapping work and data re-entry.

[Research.fi](https://research.fi) is a service provided by the Ministry of Education and Culture that collects and shares information about research conducted in Finland. CSC – IT Center for Science implements the service in cooperation with research organisations and funders. The service improves the discoverability of information and experts on research and increases the visibility and social impact of Finnish research.
