

A person in a dark hoodie and pants is captured mid-air, jumping over a metal barrier in a narrow alleyway. The scene is dimly lit, with a yellow banner overlaid on the left side containing the word 'COMPLEAP'.

COMPLEAP

New digital solutions
for lifelong learners.

COMPLEAP

ComLeap is an EU-funded project that aims to create new EU-wide digital services that help individuals in competence development.

ComLeap raises self-awareness by helping citizens to improve their employability in finding a (new) direction in life. This is done through building a unique competence profile of formal and non-formal competencies.

How does it work?

- The ComLeap framework forms a platform for a flow of modular services for competence development.
- The framework will support the creation, evolution and implementation of a structured, digitalized lifelong learner pathway integrating competence mapping, comparing education offer, labour market needs and learning analytics.
- ComLeap is focusing on the needs of diverse groups, such as NEETs, migrants and those who change jobs.
- The ComLeap Learner Path aims to link the processes of competence mapping and educational opportunity comparison together into one fluid personalized process, using data from both the learners themselves and national data registries.
