

A person in dark clothing is captured mid-air, performing a parkour jump over a metal railing in a narrow urban alleyway. The scene is dimly lit, with a bright yellow banner overlaid on the left side. In the background, a building with a red facade is visible through a series of doorways.

COMPLEAP

A framework that helps learners to organize and use their competences.

COMPLEAP

ComLeap is a project to support lifelong learning. It aims to create new EU-wide digital services that help individuals in competence development.

ComLeap raises self-awareness by helping citizens to improve their employability when finding a (new) direction in life. To achieve this ComLeap builds a unique competence profile of formal and non-formal competencies.

How it works:

- The ComLeap framework forms a platform for a flow of modular services for competence development.
- The framework will support the creation, evolution and implementation of a structured, digitalized lifelong learner pathway integrating competence mapping, comparing education offer, labour market needs and learning analytics.
- ComLeap is focusing on the needs of diverse groups, such as NEETs, migrants and those who change jobs.
- The ComLeap Learner Path aims to link the processes of competence mapping and educational opportunity comparison together into one fluid personalized process, using data from both the learners themselves and national data registries.
