

# 050619 Europass-Compleap Innovation WG

Presence: Erik, Annica, Eva, Antti

## New Europass

Three pillars

- **e-portfolio** all information CV etc. - Compleap competence profile - all European citizens for free, first version simple - upgrades after that - possibility to store open badges
- information portal - **learning opportunities** - new Ploteus - earlier differences between countries data - linked to e-portfolio
  - list of guiding opportunities - competences validation - not online guidance yet
- organizations can issue digitally signed credentials - formal education institutions - digital diplomas, volunteering, companies etc. certificates - European Standard for credentials, open badges?

Availability of data for new Ploteus is still negotiated - how does this negotiation run compared to timeline?

Technical, political challenge - what's going to be in it? Only formal education or something else - differences between countries - launching in February 2020 - does not sound feasible - 10-100% When can you launch and when not?

Idea of competition is ridiculous - compare resources

How the thinking that has been done in Compleap would help Europass - architecture framework thinking should be available first in EU countries - Compleap can help

Co-operative - competing scenarios

Using video for Europass purposes

Best result:

- not competing
- what has been done could be useful for Europass purposes
- Architecture? Not presented architectural views
- Sharing all material for sure
- Learning analytics - not sure how they are doing that

Far more important to talk William O'Keeffe. Innovation Wg only group of people working with national Europass Centres. Martin Le Vrang (architect type person, ESCO), other on digital credentials

- technical, architecture

Video, html prototype, - 30 minutes - 3-4 o'clock Budapest time 4 o'clock Finnish time

Erik will talk Monique. DUO arranging meeting June last week, July first week - meeting in Brussels - more efficient to William

Mika Launikari?
