Fill-in exercise: creating and evaluating

Create fill-in exercises

1. Fill in the text in the editor

2. Place the cursor on the right place in the text

3. Choose the green "marker"

<table>
<tr>
<td>

Embedded Answer Properties ✕

Correct Answer

File Explorer

Case sensitive (textual answer only)
○ Yes ◉ No

Numeric Answer
○ Yes ◉ No

Required answer precision (± of correct numeric answer value)

2 ⬍

Usage

Use vertical bar (|) to separate correct answer options from each other. Use asterisk (*) as a wildcard to match any series of characters. For example

`*ship|boat|ferry`

would match answers "ship", "flagship", "boat" and "ferry". If you really do want to match an asterisk or a vertical pipe then use a backslash like this:

`10\*10=100`

OK Cancel

</td>
<td>

Choose the correct answer

1)   Write the correct answer with "|"   Cat | catlike

2)   Use * if the beginning or the end of the word does not matter. Eg. Cat*|Catlike

3)   Define if the answer is case sensitive

4)   Define if the answer is numeric

</td>
